Jeffrey: Pete's out, but will be back soon. I've cc'd Dan Boudreau who is the Chemistry team leader and also acting supervisor of my unit. Thanks for heads up, do you have any sense of the number of samples and what reporting levels work in Michigan would require?

Sincerely,

Ernest Waterman

Ernest,

Realized I didn't include you on my email Saturday. We are not asking to send samples right now, but I wanted to be

ready in case the State of Michigan asks for assistance. Can you and Peter discuss and let me know if the lab can support IF we get a request? My original email is below, I have not talked to Peter yet about this.

This has been declared a local emergency in Michigan, so we are just getting everything lined up.

Thanks so much for looking at this for me. Please see below.

Thank you,

Jeff Kimble, EPA OSC

Hi Peter, hope all is well.

We have a situation in Michigan (Parchment Twp in Kalamazoo County) where the water has tested at 1410 ppt for PFOS+PFOA. Does the Region 1 lab still have the ability to run method 537 V1.1 and does the lab have some capacity in the next few weeks for running some samples if we send them?

The State of Michigan has not asked yet but we don't want to wait until they are in real need before we find out if we could support them.

Just wanted to get a sense of EPA ability to help out on short notice, thanks.

Let me know –

Thank you,

Jeff Kimble, EPA OSC
